Rutagut Ritik Rout

IBM18CS151

8/10/20

Request time out :- Command comes after ping response when the end device isn't able to send confirmation of receiving the message to the host device.

When 2 devices aren't connected (configured) messages received are → request timeout, destination unreachable. as reply.

Every interface should have unique ip address. Each router interface must be individually added.

Show ip route :- command used to indicate networks directly connected. If we send packets to networks not connected to this router, the router has no information about the other network hence we get message "destination host unreachable"

Rutagut.
